

Project Update: July 2010

Our summer trip was completed successfully. It lasted from 25 June to 30 July 2010. We managed to survey Kakavaberd branch of Khosrov NR, part of Urts Range, Jainam-Darasi Gorge (cutting off Urts Range from Aiotdзор Mountain Massif), and part of Megri Range and Zangezur Range from Gyard Valley to Sakhkasy Valley.

We counted, aged and sexed 77 wild goats in Kakavaberd, just two in Urts, 26 in Jainam-Darasi, 102 on Megri Range and 230 in Zangezur. We also saw 51 mouflon (in Urts and Zangezur), two bears in Zangezur, a female wolf in Urts, a golden eagle's nest with two nestlings and an Egyptian vulture's nest with supposedly two nestlings.

We also found and measured two wild goat male horns.
