

## **Project Update: June 2012**

The brochure on protected and strictly protected fungi from the Red List and the Country Map of IFA have been published (with the Rufford logo) and are available for view on the link as follows <http://www.esnips.com/thumbnails.php?album=4890092>. Their extensive dissemination among the local population and the stakeholders has begun and it will also continue as a follow-up project activity.

There has been electronic media coverage of the presentations on fungi species description, distribution and protection measures and of the exhibitions of red listed fungi <http://tera.mk/aktuel/pechurkite-od-demirhisarsko>. The awareness raising via presentation of the outreach material in public media will continue. The compiled Red List of Fungi has already been sent to the European Council for Conservation of Fungi Newsletter for publication. The List of Protected and Strictly Protected Fungi Species of Macedonia will become part of the Rulebook on strictly protected and protected wild fungal species, which will be officialised in the forthcoming autumn.
