

Project Update: November 2011

We are at the final stages of sampling fishes from Gilgel Abay and tributary rivers. We have scheduled an awareness creation workshop on 30th December 2011 to discuss issues on conservation of *Labeobarbus* spp. in the Lake Tana sub-basin. At the workshop progress report will be presented on the *Labeobarbus* spp. migrating from Lake Tana to Gilgel Abay River and its tributaries. Related issues like the status of fish and fisheries in Ethiopia, migration and reproductive behaviour of *Labeobarbus* spp. in the Lake Tana sub-basin, Federal and Regional Legislation and regulations pertinent to fish and fisheries in Ethiopia will also be discussed. Fishermen, development workers, and some officials of the surrounding district are expected to attend this workshop.
