

Project Update: September 2012

Today around noon Batumi Raptor Count crossed the magical cape of 1,000,000 raptors during a single migration season!

A historical day for our organisation to which over 200 former volunteers from over 20 countries worldwide will undoubtedly be raising their glasses tonight!

More information on the record season for honey buzzards and Montagu's/pallid Harriers was posted already earlier this season on our website:
