

Project Update: July 2014

The project team is pleased to present the first abstract that resulted from our surveys in 2013: "Acoustic partitioning in a marine vertebrate community off Brazil". It was presented at the Ecoacoustics Symposium at the Muséum national d'Histoire naturelle (Paris, France) in June 2014. The abstract concerns the acoustic partitioning in the whales' environment and is grounded on the acoustic niche hypothesis. It is an honour to be part of the selected researches who attended this event and who represents the advancement of the emergent science of soundscape ecology. Please find the complete abstract book at: http://ecoacoustics.sciencesconf.org/conference/ecoacoustics/pages/EcoacousticsBook_v4.pdf . Our quoted abstract is at page 17.
