

Project Update: August 2014

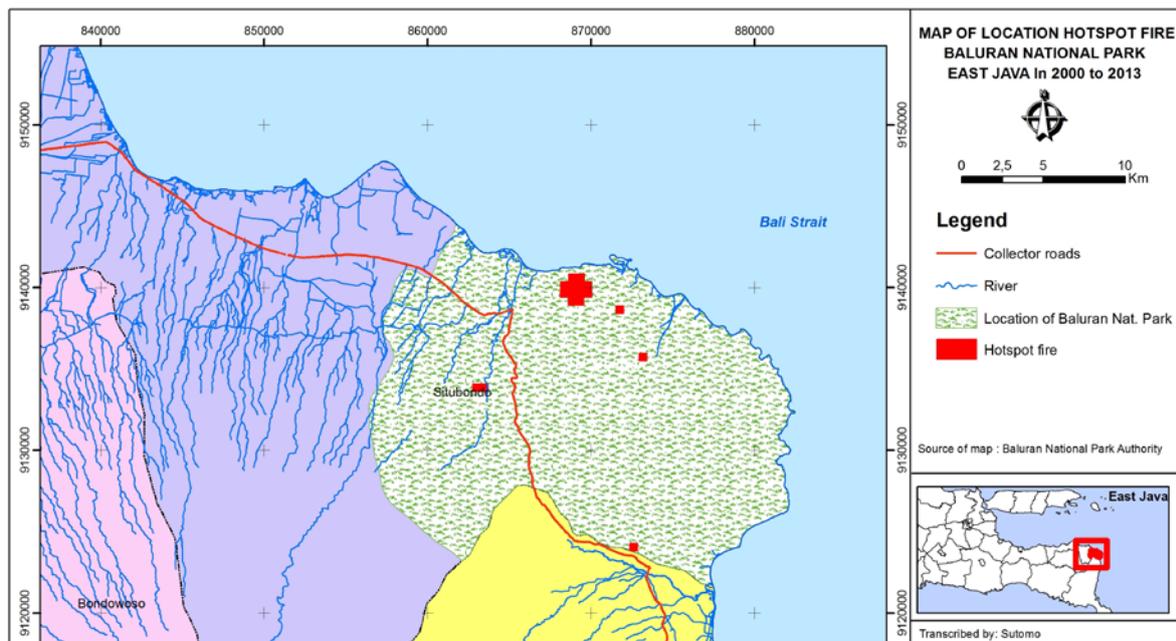

We have conducted a preliminary study on invasive alien woody species *Acacia nilotica* in botanical garden.

We also have done GIS (Geographical Information System) study and have created a map of Baluran National Park where the fieldwork will be done. Hotspots distribution map on Baluran National Park has also been created. The map shows that there has been fire disturbance in the national park from year 2000 – 2013.

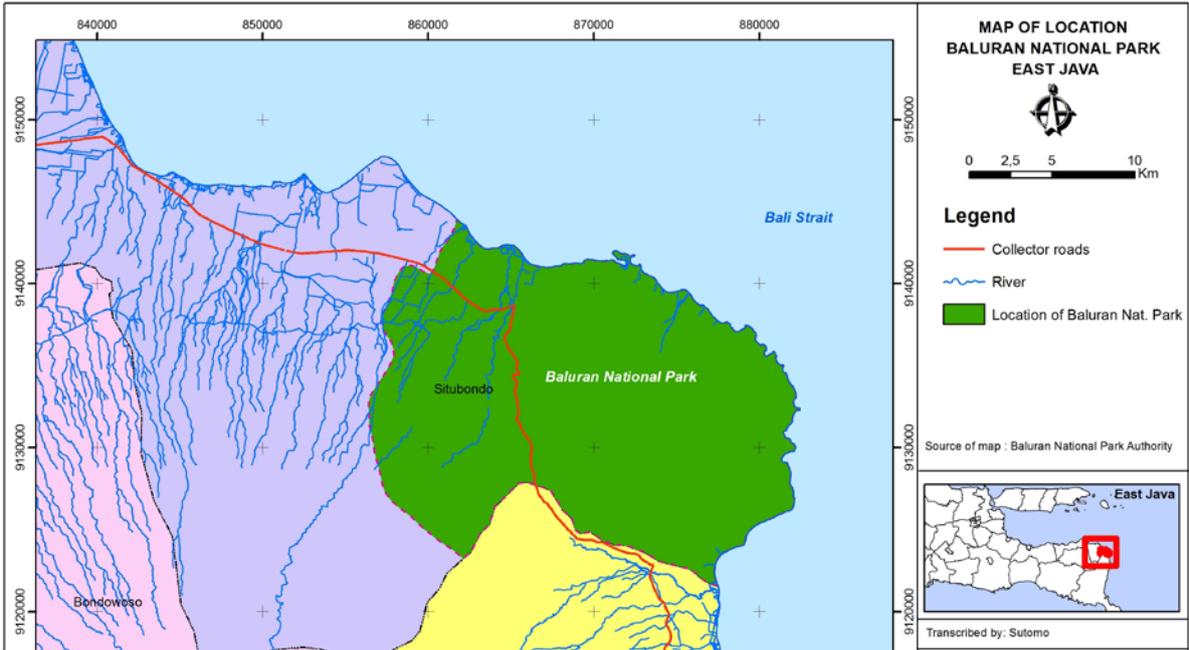

We also went to Ministry of Forestry central office in Jakarta to arrange for permits to enter the national park and to conduct the fieldworks.
