

**Project Update: October 2014**

Next steps after sample collection now will include:

- 1) Have local collaborators collect some samples until the end of the year.
- 2) Laboratory analyses on samples.
- 3) Data analyses and interpretation of results.
- 4) Publication of results.

			
<p>1. The shark is unhooked carefully</p>	<p>Placed in a water filled tub</p>	<p>A biopsy-clip is taken from the fin</p>	<p>It is preserved immediately</p>
			
<p>The total length is them measured</p>	<p>The sharks gender is determined, male</p>	<p>female</p>	<p>After 2-3 minutes the shark is released</p>
