

Project Update: May 2016

Just to share you some photos. It has been busy schedule between field work in Ethiopia and laboratory work in CEES, university of Oslo. I sequenced over 500 DNA samples of the cryptic red river hog and African wolf, striving for three manuscripts at the moment all to journals of top class.

I am sorry not able to get the report of the Cherie project on the kobs migration. As I mentioned last time, I was helping him in the corridor analysis in GIS and R from him extra ordinary GPS data of kobs migration over 1000 km with his 45 satellite collared kobs before his tragic death.
