

Project Update: June 2016

As a part of the initial project activities we have done meetings with other communities of the area so as to develop conservation projects together. In each one of them we discussed about the reach of the “Quebrada del Yermal” proposal and came to the possibility of the participation of the different community estates in de mammal monitoring activities, and also of sharing the generated information with the purpose of amplifying the territorial capacities for the conservation actions.

We have placed cameras in several of the community estates closest to the “Quebrada del yerbal” in order to obtain valuable information about the fauna of the high basin of Rocha’s lagoon area.

List of species recorded until june 2016

Common name in spanish	Scientific name
Comadreja mora	<i>Didelphis albiventris</i>
Mulita	<i>Dasyus hybridus</i>
Tatú	<i>Dasyus novemcinctus</i>
Peludo	<i>Euphractus sexcinctus</i>
Guazubira	<i>Mazama gouazoubira</i>
Jabalí	<i>Sus scrofa</i>
Liebre	<i>Lepus europaeus</i>
Lobito de río	<i>Lontra longicaudis</i>
Mano pelada	<i>Procyon cancrivorus</i>
Gato montes	<i>Leopardus geoffroyi</i>
Margay	<i>Leopardus wiedii</i>
Hurón	<i>Galictis cuja</i>
Zorro gris	<i>Lycalopex gymnocercus</i>
Zorro de monte	<i>Cerdocyon thous</i>
Carpincho	<i>Hydrochaerus hydrocaeris</i>
Aperea	<i>Cavia aperea</i>

The project will work over 2016 in coordinating actions and articulate activities of conservation in more of ten community and/or private estates of the “Sierras de Rocha”. This represents more than 1,500 ha in the high basin of Rocha’s Lagoon area.
