

## Project Update: August 2016

During August 2016, we produced a documentary about the project and shark research in Montenegro for the "Life with sea" series, which was broadcast on national TV station "Vijesti". Here is the YouTube link of the movie: [https://www.youtube.com/watch?v=Zclh2E\\_GnSI](https://www.youtube.com/watch?v=Zclh2E_GnSI). Also, we connected with scientists from "Sharklab International", an NGO from Malta that is dealing with the shark conservation in the Mediterranean Sea. During the fieldwork we confirmed that habitat condition (food resources and other) is good, but all blue sharks recorded by fishermen was found very far from shore. We consulted with the research scientists from the previous mentioned NGO and get the conclusion that main reason for that is big human pressure in the coastal region that we are researching during the summer tourist season.
