

## Project Update: August 2016

During the months of July and August were conducted field research for a period of 20 days and that included national parks at Prokletije, Durmitor, Bigradaska gora, Skadar Lake and the rivers Cijevna and Sitinica. In the area of national park Prokletije is registered five new habitats for species *Buxbaumia aphylla* and a new site in the area of the National Park Durmitor. On the River Cijevna is registered species *Fissidens fontanus* as a new locality for species in Montenegro. With all location is collected botanical material that determines the laboratory. Also during this period is started with technical preparation of promotional materials (posters, flyers).
