

Project Update: April 2017

During the second half part of the project, we organised a workshop with administration and all the rangers of National Park Kozara in the facilities of new info center. Members of local speleology association were also present. During the workshop, we had a presentation of achievements and current findings of the research within the project. We also discussed about importance of bats in the nature, hopefully continuation of the research and future activities and collaboration between our organisation and national park. All the participants showed interest and agreed with the points of importance of bats.

In the end of the workshop we handed printed brochures “Bats of Kozara” which will be used as promotional material in the Info center.

Director of National Park, Mr Dragan Romcevic, during the conclusions, expressed his satisfaction with the results and collaboration with the comment that this project should be continued in order to establish database of bats in the park which will be supplemented during the future time.

Next activity which will be done during May 2017 is field visit for spring period, applying described methodologies.

Below and attached, there are some pictures from the workshop.
