

Project Update: August 2017

On March 15th 2017, an interview at Polar Radio was performed in Punta Arenas. During the radio interview I talked about the project, telling about the feeding of the humpback whale in Francisco Coloane Marine Area, and the importance of fuegian sprat and lobster krill in the food web.

On March 17th, a meeting of the project was undertaken for the workers of the Fisheries Development Institute, in Punta Arenas. During this conference, I talked about the objectives of the project and the importance of the fuegian sprat.

Between the 20th and 25th of March, the second field trip to Francisco Coloane Marine Area was performed with the support of The Rufford Foundation and Juan Capella an investigator of the Whalesound Tourism Company. In this field trip, whale skin samples and zooplankton were collected for the study of the feeding of the humpback whale with stable isotopes analysis
