

Project Update: November 2016

Field data was collected with the help of forestry staff and the local fishermen. Data has been collected for the two seasons, summer and post monsoon. Various techniques have been used to gather data and information of fish diversity along the Gamri River. Following represent the photos of different types of fish collected as data and specimen for the two seasons.

Following are the photos of local fisherman and forestry staff collecting data along the river.

Moreover, awareness training on importance of conserving freshwater ecology was successfully imparted to the riparian communities. Main points such as important of communities at the water source to the aquatic life at the downstream were discussed. Photo of fishes were shown to the communities.
