

Project Update: September 2010

We have successfully completed the 10 nature education camps and plantation of remaining 2000 saplings of *Salvadora persica* in Banni saline patches in Dhoordi area.

The other 8000 plants planted in 30 schools in the Bharapar area, Dhadko area, and near Jathavera village are doing well. We have also carried out the mortality replacement plantation in schools of Moti Virani, Sukhpur, Devisar, Aral and Rameshwar. The *Salvadora persica* plants were watered once in Banni by tractor-tanker. We are keeping regular watch on the plantations in schools and in nature.

The major objective of the project, planting of 10,000 saplings in schools and in wastelands, saline patches, Banni area, is thus complete. We will be organising the awareness programmes over a 1 month period.
