

Project Update: August 2009

Recently I participated in the International Mammalogical Congress 2009, here in Argentina, and I presented some results from the project of jaguars and pumas in the Argentine Chaco that Rufford has financed in 2008.

Ecology and conservation of *Panthera onca* and *Puma concolor* in the semi-arid Argentine Chaco.

Introduction:
The Argentine Chaco is a semi-arid region with a high density of jaguars and pumas. The region is characterized by a high density of jaguars and pumas, which are the main predators of the region. The region is characterized by a high density of jaguars and pumas, which are the main predators of the region. The region is characterized by a high density of jaguars and pumas, which are the main predators of the region.

Study Area:
The study area is located in the semi-arid Argentine Chaco, a region characterized by a high density of jaguars and pumas. The region is characterized by a high density of jaguars and pumas, which are the main predators of the region. The region is characterized by a high density of jaguars and pumas, which are the main predators of the region.

Methods:
The study was conducted using a combination of field observations and camera traps. The study was conducted using a combination of field observations and camera traps. The study was conducted using a combination of field observations and camera traps. The study was conducted using a combination of field observations and camera traps.

Results:
The study found that jaguars and pumas are the main predators of the region. The study found that jaguars and pumas are the main predators of the region. The study found that jaguars and pumas are the main predators of the region. The study found that jaguars and pumas are the main predators of the region.

Conclusions:
The study concludes that jaguars and pumas are the main predators of the region. The study concludes that jaguars and pumas are the main predators of the region. The study concludes that jaguars and pumas are the main predators of the region. The study concludes that jaguars and pumas are the main predators of the region.
