

### **Project Update: June 2018**

I wish to inform you that the work is progressing. Three of the four villages have been sampled. The village of Muyenge found on the other side of the mountain has not been sampled due to the ongoing socio-political tension in Cameroon. Muyenge happens to be one of the most affected areas. We halted with the hope that the situation will ameliorate but instead it is getting worse. Therefore, I wish to take the study to Bokwango, still a surrounding village to the mountain. It is very unsafe to go to Muyenge plus the fact that there will be no villagers to be interviewed as they have all fled to the bushes.
