

Project Update: September 2017

We have performed at the school a science fair with different games related to the importance of native forest conservation. We made activities and games in which the main objective was creating in children awareness on conservation while playing. For that, we focused on key species of native mammals, ecological process occurring in native forests and the importance of forest on providing ecosystem services for human-beings.

Children playing a game in which seeds of native species have to go across different ecological and climate challenges until they germinate. @Gabriel Grilli.

Children playing a game of a trophic network with native species that is altered by different anthropogenic activities. @Gabriel Grilli.

A book stand with diverse books from plant and animal species of Espinal forest. ©Gabriel Grilli.

An experimental approach performed to show the importance of forest cover vs. bare soil on rain process. ©Gabriel Grilli.
