

Project Update: January 2018

Lectures and Presentations

Participants on the project, Aleksandra Milošković and Nataša Radojković from the Faculty of Science, University of Kragujevac, gave lectures to students of the seventh grade of primary school "Milica Pavlović" in Čačak. Children were filling in questionnaire on the basic knowledge of crayfish ecology. After the presentation, external morphology and anatomy of the stone crayfish were presented using demonstrating preserved model which enable children better understanding of some important functions of this species.

With this presentation first phase of educational campaign planned within the project was finished. Few months before end of the project testing will be repeated in order to quantify increase of public awareness on active approach in wildlife conservation.
