

Project Update: March 2018

On the day of installing the beehives all the members of the group were required to be present. Group discussion was conducted to assess the honey harvesting season in the area by members identifying the various plants and their flowering seasons and filling in the floral calendar that was kept by the officials of the group. Members were also shown how to fill the activity and progress sheets for each bee hive. We managed to install some of the beehives, the rest of the bee hives were installed by the jumbo group a week later.
