

Project Update: March 2018

In spring 2018 during the seed time we were in Racha-Lechkhumi for 2 days. With pupils we have done the field work on the place we have choose and sowed the wheat. During the excursion on the field pupils learned how to process the soil, also they have valued the choosen soil's habitat and characterizd ecotopologicaly.

On the places which were chosen by pupils independently processed the soil and sowed the wheat grains. They have drawn the boundaries on the field with protected grid. Every interested pupil was joined and working with there teacher. On the field they have learned the technics of doing herbarium, using the GPS and taking the coordinates. Parallel we have done the pilot plot on the territory of the National Botanical Garden of Tbilisi.

After all this we have created Facebook account and to the end of the week pupils were informing us and sending photos about developing phases of plant, we were adding photos and they matching to each other the steps and the phases of plant. Also we

were making little quiz games on Facebook, which helped us to find out more active pupils.
