

Project Update: September 2018

In September 2018 we have chosen most active pupils from Racha-Lechkhumi and took them on excursion in Tbilisi. At the Botanical Institute of Tbilisi active pupils with us have represented project report. The presentation was attended by the scientist-researchers of Botany Institute and invited guests. The presentation was held successfully, our project was interested by both parties, which gave us opportunity do get a lot of suggestions about future collaboration about the other projects. Active pupils who had great interest and enthusiasm were gifted the Georgian botanical dictionary.

We made for them little excursion and we showed them: Herbarium of Georgia Institute of Botany, Tbilisi Botanical Garden and Georgian National Museum. We have decided to make Chelta Zanduri (*Triticum timopheevii*) wheat autumn-spring plots both in Racha-Lechkhumi and Tbilisi Botanical Garden, with our active pupils which were by our side through this project.
