

Project Update: November 2017

The Palk Bay area as proposed previously for our research work is not accessible at this moment due to heavy rain and tropical cyclones. We surveyed Mithapur area and found sparing distribution of seagrass (*Halodule uninervis*). The sites we selected are found to be ideal for seagrass nursery, and it is with minimum disturbances.

GPS Coordinates of seagrass diversity surveyed sites - Mithapur are as follows

S.NO	SITE LABELLED	GPS location
1	S1	22°26'15.0"N 69°00'03.8"E
2	S2	22°26'57.2"N 69°01'01.5"E
3	S3	22°26'56.80"N 69°00'15.32"E

The study area at Mithapur in Gujarat.
