

Project Update: December 2018

Our RPS system has encountered the first elephant yesterday. An elephant crossed our system atg 8.30pm and went to banana farm. Our system has successfully detected the event and immediately sent 'Elephant Detected' SMS to forest officials mobile. Forest guards rushed to the place and burned crackers to drive it back to the forest. Finally elephant returned to the forest following the same path and once again got detected by our system at 10.40pm. It's a great success for our system. I am attaching elephant footstep photograph taken by the forest guards for your reference.

Elephant footprint.
