

Project Update: September 2018

During the period of May to October following activities on project were done:

- The third field trip finished. The main goal of this field trip was assessment of moss population. Special attention given to endangered species which are registered on the Cijevna River. Special attention given to endangered species which are registered on the Cijevna River. New species which are collected to the field trip are determined in the laboratory.
- The paper "New and interesting bryophytes of Albania and Montenegro" has been corrected following reviewer's suggestion. Paper accepted for publication in prestigious journal Herzogia, and will be online available in beginning of November 2018.
- In this period we provided presentation of project in primary and secondary schools. In some schools are organised a small field trip in surrounding in the aim to students enhance their knowledge about moss.
- In this period we also worked on raising awareness and promoting the value of mosses in nature through activities such as: lectures, TV appearances, installation of informative boards.

Above: Installed information board at the mouth of the Cijevna River, at one of tourist info point. Below: Lectures for students.

Raising the public awareness, one of TV presentation of project (one whole broadcast is dedicated to the project we are implementing):
