

## Project Update: March 2018

In the first 2 months of work, the following has been done:

Capture and photographic records of stingless bees in the localities (Nocupetaro, La Estancia Grande, Paso de Nuñez, Erendira, Lombardía, El Jagüey). From these collections we obtained helpful records of at least five species of stingless bees and ecological data of diversity and abundance.

Application of interviews to document local knowledge of stingless bees in the localities of *Paso de Nuñez*, *La Estancia Grande*, *Lombardía* and *Nocupétaro*.

Oral presentation on the importance of conservation and sustainable management of stingless bees for high school students in town of Lombardia, Michoacán state.
