

Project Update: July 2020

Discussions/interviews with local fishing community

Collecting information from a gleaner adjacent to the donor seagrass bed

Before replanting efforts

Top left: Mixing up muddy sand from donor site and fertilizer, Top right: Collecting donor seagrass plugs, Bottom left: A plug of seagrass replanted in a hessian bag – after 3 months (underwater), Bottom right: A patch of restored seagrass – after 1.5 years.
