

## Project Update: October 2018

As it is predicted by project timescale, during July 2018 we designed and produced all promotional materials (100 t-shirts were made, cups and 1500 educational leaflets) and traps for catching crabs. Until now, educational leaflets and t-shirts have been distributed to the fishermen, but it is also plan to distribute leaflets to the children at educational lectures in schools. During the first 3 months of the project, we worked interviews with local fishermen in the area of Ulcinj and Bar. Interviews with fishermen enabled us to get more information about the appearance of *Callinectes sapidus* and its spread along the coast. Also we done the fieldwork activities along the Montenegrin coast. Fieldwork investigations was made in the area of Tivat Solila where we found 4 blue crab and one blue crab is found on Valdanos (Ulcinj).
