

Project Update: February 2023

From March to June 2022, informative talks were held with the staff of the protected areas and the surrounding community about the monitoring of the endemic owls.

In October 2021 we created the Instagram profile to carry out the scientific dissemination in order to generate tools that promote the knowledge and conservation of the owl species and their habitats.

Participation in different academic events:

- VII Colombian Congress of Ornithology August 10 to 12, 2022
Endemic Owls of Atlantic Forest: Climate change impacts and effectiveness of protected areas in their conservation
- III International Conversation The birds connect to the world from myths and legends. "Owls and owls"
November 21, 2022
Endemic owls of Atlantic Forest: a silent threat to its long-term conservation
