

## Project Update: October 2021

In August 2021, our team carried out fieldwork in Aparados da Serra National Park and Serra Geral National Park located in Cambará. During this month, we selected the sampling points that will be used in this area. We request the permission of some landowners around the park in order to expand our sampling area in the buffer area.

In September and October 2021, our team carried out fieldwork in the São Francisco de Paula National Forest, where we selected the sampling points that will be used in this area. We visit some farms around the protected area in order to request access permission. In addition, we perform acoustic tests in the field in order to define our sampling protocol.
