

Project Update: April 2021

During the month of April 2021, we concluded the preparation of an ensemble of different communication and awareness materials to be used in the awareness sessions about the importance of vultures and their conservation in Guinea-Bissau. This included three different posters, a flyer, a brochure, t-shirts, several power point presentations, a script for radio interviews and a support script for meetings and talks. These have been prepared by the project team in the local languages and were reviewed by the partner institutions in Guinea-Bissau. The local partners will be trained in the use of this awareness kit and the materials will be distributed to local stakeholders during the several awareness activities throughout the areas of intervention.
