Project Update: March 2022

February 21st, 2022
We have sent the necessary files to the Deep Voice Whale Research Foundation (Tel Aviv-Israel) for the use in the AI software and we also have made some contact with the communities and how they can be benefited from the results for ecotourism purposes. The group organisation, identification, number of individuals and definition of the group of the whales have also been made. We are currently doing the analysis and exploring some more statistics analysis that could be made.

Some talks with tourist about the importance of preserving ecosystems for whales and other living sea creatures.

Photo of mother-calf, for the group identification

Photo of two adults- for the group identification.
