

Project Update: June 2021

Activities:

Project website was created at www.ugwa.ng (site undergoing maintenance). It consists of 6 pages viz: Home, About Us, View Projects, Database, Resources and Contact us. Each page carries information with pictures.

Rationale:

Contents on the website will educate and engage the audience on insects of ecotourism importance not only in Sunmoge but also in other parts of western Nigeria. Conservationists and researchers will have access to the database containing information on ecology and conservation status of the insect species.

Result:

The work is ongoing. The work includes preparation of the right content in suitable amount of information to offer end-users what they need. This will facilitate an easy compilation of project results made accessible to the public to use.

FAMILY ARGIOLESTIDAE FRASER, 1957 OLD WORLD FLATWINGS

Synonyms: scientific: Megapodagrionidae Calvert, 1913 (in part)

Introduction Over 40 genera and almost 300 species have previously been assigned to the Megapodagrionidae, with concentrations in Australasia, tropical America and Madagascar. This assemblage is very heterogeneous and consists of multiple distantly related families. Argiolestidae is the largest family separated from this hotchpotch in the Old World. [...]

CERIAGRION CITRINUM CAMPION, 1914

Spread the love

0 Shares

Common name: Yellow Waxtail

Scientific name: *Ceriagrion citrinum*

Diagnosis: Head and Thorax are green; abdomen yellow but become darkened from abdominal segment 6. Elongate pterostigma. Paraprocts reach well beyond the tips of cerci.

Synonym: The male of *C. citrinum* is morphologically similar to the male of *Ceriagrion tricrenaticeps*. *C. citrinum* also resembles the Asiatic *Ceriagrion coromandelianum* Fabricius, 1798 in general appearance. But the latter is smaller.
