

Project Update: June 2021

Activities carried out during the period February - June 2021.

- In March 2021, two meetings were held with Santa Ana and Caspalá communities for project presentation. During the meetings, information for the survey campaigns and workshops was collected (Supplementary material 1). All sanitary protocols for prevention of Covid-19 were followed.
- Between March and April 2021, two pilot surveys were carried out, one in Santa Ana and the other in the Caspalá area. The objective of these pilot surveys was to test the methodology proposed and change it if necessary. As a result, the field data sheet of transects for recording tracks and signs was improved, and two groups of Tarucas were recorded (Supplementary material 2, 3). For the pilot surveys we had the support of local people (Supplementary material 4).
- The crew of the National Parks Administration was included as a collaborator in fieldwork activities.
- The project was launched in different social media and social networks of CEBio Foundation. Links to interviews and the journal note are available in Supplementary material 5 to 8.
- A draft of the educational booklet was written.
- Survey campaigns are scheduled for June 28 and July 19 2021 in Santa Ana and Caspalá areas.

Supplementary material

Supplementary material 1. Meeting held with communities for project presentation.

Supplementary material 2. Pair of Tarucas in Caspalá area.

Supplementary material 3. Taruca male in Santa Ana.
