

Production of Educational Video Films

For this creative work, we developed script at first and then sent it to some conservation education snake experts and script experts from Nepali film industry to get feedback. After getting feedback from them, we finalised the script and determined the locations for the video shoot. We have produced three short educational videos including the information about snake conservation/human-snake conflict mitigation/snake rescue/relocation/snakebite preventive measures/snakebite management, etc. Experienced, well trained professional artists and technicians were hired to make high quality video films. We have conducted workshops and rehearsals with our casts and crews to provide the necessary background information to achieve favorable results. We have also collaborated with the Division Forest Office, Nawalpur to disseminate these videos. For now, we are showing these educational videos in schools/colleges and communities during our various conservation education workshops, training and awareness programmes throughout Nepal and we will continue this work in the future as well. We have already conducted meetings with the National Health Education, Information and Communication Centre (NHEICC), Government of Nepal and we are at the final stage of collaboration and going to broadcast through national and regional television soon after the approval of this educational film. We will also broadcast these videos from our various social media platforms for the general public. Our supporting conservation partners are excited to see these videos so we have added English subtitles in our videos which they will also broadcast from their own websites and social media pages through which millions of people not only from Nepal but all over the world will get benefitted after its public release.

Workshop with casts and crews before shooting the educational Docu-Drama.

Project Leader Mr. Kamal Devkota briefing about snakes of Nepal in the workshop with casts and crews before going to shoot the educational Docu-Drama.
