

Project Update: March 2022

To date, five field trips have been carried out in which approaches have been made with the community and public institutions such as the mayor's office and the Educational Institution of the district of Minas de Iracal. Additionally, the recognition of the area for the establishment of the Meliponario was carried out, where soil studies were carried out for this purpose. Finally, tours have been carried out to identify the areas for the installation of bee traps to start the installation of the Meliponario.

We are in the design and layout phase of the image of the Meliponary of the URAKU Foundation Reserve, as well as the informative material that will be used in the training activities with the students of the educational institution and the community in general.
