

Project Update: March 2011

The school environment training activity is ongoing and so far we have visited Kubar Primary School, Obambo Primary School, Obambo mixed Secondary School. The pupils and students of these schools together with their teachers are so much interested on the environment conservation topics we have been presenting to them. The students had so many questions on what they can do as individuals to help improve our environment; they wanted to know how they can plant trees, which species and how they can take care of them. Through the help of the forestry officer, the issues raised were addressed. The project has been going on so well and the staff of the schools we have visited are very much cooperative.
