

## **Project Update: August 2022**

The National Commission for Science, Technology & Innovation (NACOSTI) people called last Friday and said that they need an introductory letter for my institution for my permit to be processed.

I'm just from the Graduate School at my University (Egerton University) where I've been told that the Board of Postgraduate Studies will write the letter but only after I defend my proposal. I've raised this new development with my two supervisors and requested their intervention hoping their help might expedite things.

I'm truly sorry because all these have already eaten into the proposed timeline. It's my first time doing all these, and I sincerely didn't expect some of these hurdles. So, it's a learning process for me too but I'm determined to see all of it through.

Also, I traveled to Naivasha last week to physically follow up on my requests for presentations with the Kenya Wildlife Service and other stakeholders. Unfortunately, the senior warden and senior research scientist were out of the country for a conference in Tanzania.
