

## **Updates from Project ECOS OF SILENCE - Exploring the Impacts of Visitors on the Soundscapes of Protected Areas in the Metropolitan Region of Sorocaba**

**Name of leader: Viviane Monteiro Silva Kupriyanov**

### **Nature Watchers and Guardians Programme – Schools Activities**

We started the program in schools with a short presentation in the classroom on Brazilian biodiversity and how we can observe nature in greater detail. Also, we gave them some examples how to record what they observed: with drawings and notes about the object observed.

On April 22th at Municipal Elementary School Antonio Rodrigues Miranda Coronel:

- Picture removed for online version

And on May 9th at Municipal Elementary School Pedro Ferreira Duarte Neto:

- Picture removed for online version

Carrying handheld magnifying glasses, paper, pencils, and colored pencils, the students explored plants, small animals, mushrooms, etc. in the areas outside the schools. They really enjoyed using the magnifying glasses and went in search of new things, according to their own curiosities, looking for living organisms or non-living structures.

Outdoor when students could explore the neighbour nature at Municipal Elementary School Antonio Rodrigues Miranda Coronel:

At Municipal Elementary School Pedro Ferreira Duarte Neto:

The students then recorded their observations on paper, which were later displayed on the bulletin boards of their respective schools.

At Municipal Elementary School Antonio Rodrigues Miranda Coronel:
