

Project Update September 2025

Rufford I.D.: 44874-1

Project Title: Population Monitoring and Migration Patterns of the Lesser Flamingo *Phoeniconaias minor* at Lake Natron, Northern Tanzania

Update: I am delighted to share that we have successfully tagged two adult Lesser Flamingos at Lake Natron — the first time this has ever been achieved in Tanzania. This marks an exciting milestone for our project and opens new opportunities to better understand their movement ecology.

Please find attached a few photographs for your reference. We will continue to keep you updated as we begin tracking the movements of these tagged individuals.
