

Project Update: December 2010

Two expeditions for field work and observation of broadleaved forests in Mezynskyy National Park have been conducted. The phytocoenological descriptions of forest vegetation have been made for ecological and phytocoenotical evaluation - the monitoring plots have been laid down.

The preliminary list of flora and fauna species of the park has been composed. Data for schematic map of broadleaved vegetation have been collected.

The "Rykhlivska dacha" ecological path for excursions, which had been laid through hornbeam, hornbeam-oak and oak-hornbeam-ash forest plots, has been established in the east part of the park. The preliminary sample of booklet on ecological path for ecotourism activity has been elaborated.

At an international conference, the oral presentation of "Habitats of Mezynskyy National Park" was made. We published the informative booklet for ecological tourism and for distribution of ecological information among local population.

Also, in the local periodical issue, which is called "Sivershchyna", the article about reservation conditions in the Mezynskyy National park and rules of behavior in the park have been published.

The excursion for children called "Our forest" as well as workshop for representatives of local authorities have been conducted.
