

Project Update March 2026

Rufford I.D.: 47573-2

Project Title: Critically Endangered Vulture Research and Grass-root Conservation: The Case for Urgent Action in West Africa with Collaboration of Local Communities

Update:

We have now done many of the activities related to the project, including the environmental educational activities in 3 communities around Mole. We have also done the interviews in those communities. In addition, we have done the nest monitoring and reproductive ecology studies and have photos of the vultures incubating and chicks on the nests. So we are very happy with the advance of the project so far. I send you some photos of these activities.
