

Project Update: June 2010

From April – June 2010 we continued the case study with field trips and administered questionnaires to traditional practitioners for the identification of medicinal wildlife species. We've so far got information from 48 traditional practitioners contacted and identified 49 medicinal species, for 57 medicinal usages.

- a) Wrote information letters to the seven Divisional authorities (Delegates) in charge of wildlife management, attaching copies of the "Message On Sustainable Medicinal Wildlife" and solicited that they propagate the message in their various units.
- b) Lectured and distributed the "Sustainable Medicinal Wildlife" flyers to a gathering of fellow forestry/wildlife management staff after Military March-Past on National Day (20th May 2010).
- c) We again passed the "Message On Sustainable Medicinal Wildlife" on CNTV news-bar for 40 hours, besides distributing them publicly as flyers.
- d) Lectured and distributed the "Sustainable Medicinal Wildlife" flyers to members of the Regional Union of North-West Tradipractitioners on June 18 2010.
