

Project Update: August 2006

On the last report we informed that 38 nestlings were born occupying 23 artificial nests. 22 nestling of those took first flight.

Monitoring of artificial nests per breeding site of the Red-tailed Amazon, along the coastline of the state of Paraná- 2005/06 breeding season was conducted.

| Breeding Aspects | Rasa | Gamelas | Grande | Continent |
|----------------------------------|------|---------|--------|-----------|
| Monitored Holes | 30 | 10 | 10 | 10 |
| Nests in Activity | 14 | 5 | 4 | 0 |
| Nests Successfully Reproductive | 8 | 4 | 0 | 0 |
| Nestlings that took First Flight | 15 | 7 | 0 | 0 |

During June and July were evaluated artificial nest conditions of nests installed on Ilha Rasa site. 4 new artificial nests of PVC were installed, in order to replace wood nests in bad condition. Also, 10 wood nests were installed. In total there are 40 artificial nests installed on Ilha Rasa site, for the next reproductive season.
