Outline

- ◆ Background
- ◆ Impact of invasive species on African countries
- ◆ The relationship between invasion process and management options
- ◆ Globalization as a Driver of Invasive Alien Species in Africa
- ◆ Number of established alien species in Africa
- ◆ Importance of policy direction, strong institutional and legal environment
- ◆ Propose a framework for mitigating key challenges associated with invasive species management in Africa
- ◆ Conclusion

Background

- Humans have been moving plants around the world for centuries
- Some introduced species die out while others survived- termed as alien species
- Invasive alien species(IAS) are those that spread and cause damage

Impact of invasive species on African countries

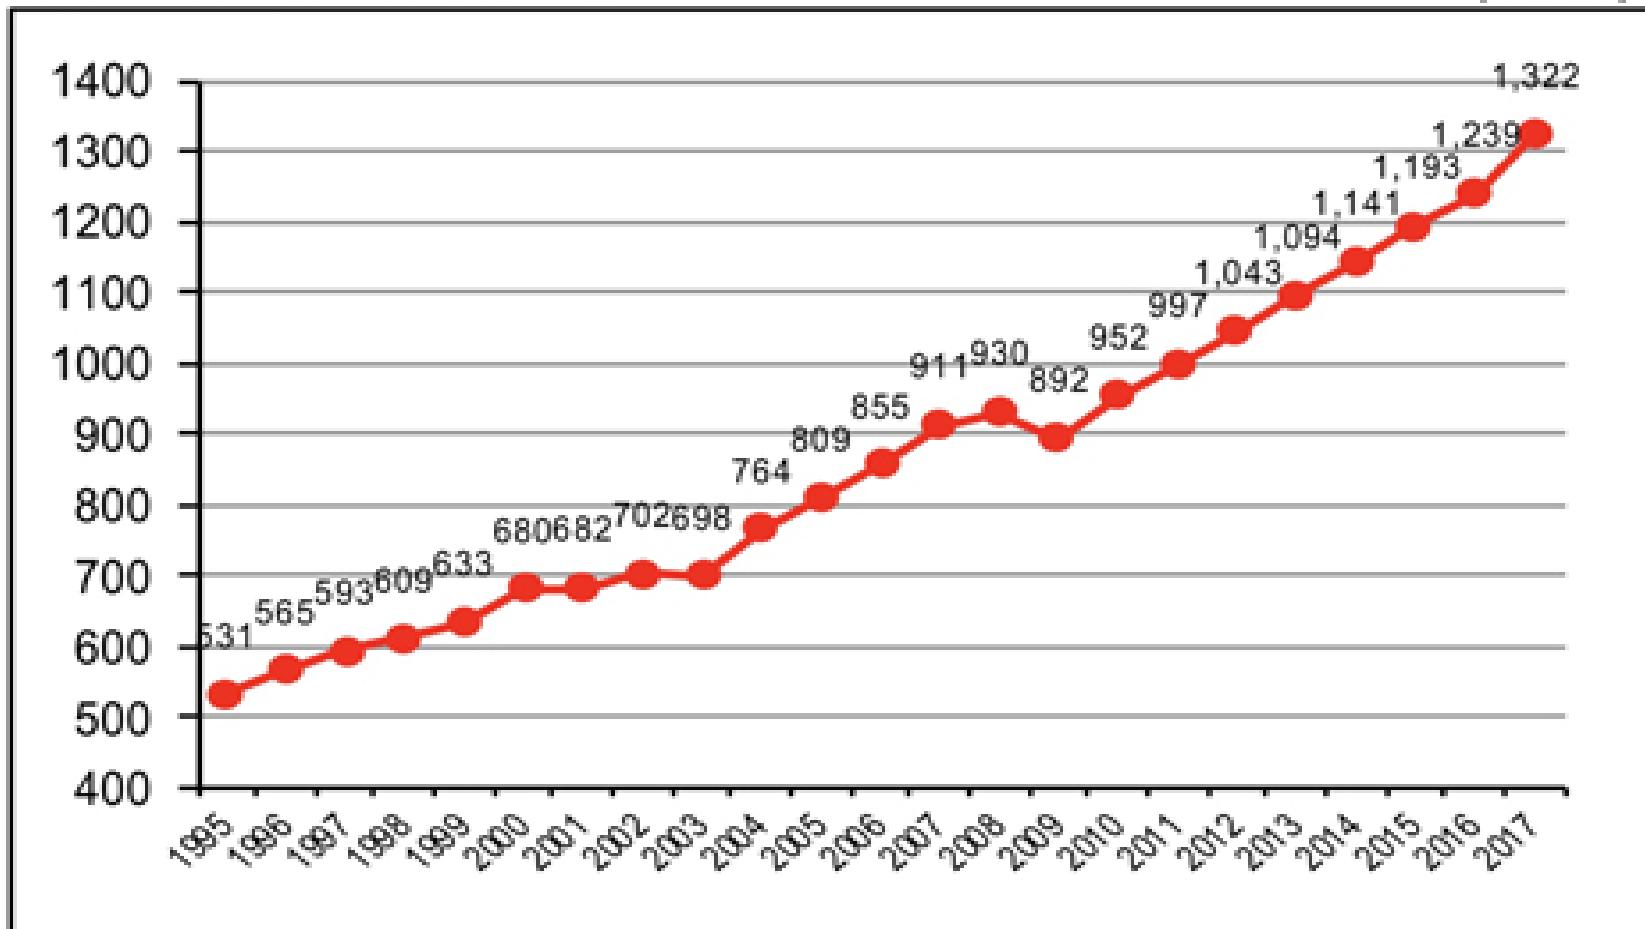

- For majority of IAS their negative impact outweighs their positive contributions
- Impacts include
 - ✓ reduce palatable fodder on pasture-lands
 - ✓ Poison livestock
 - ✓ Impact on fisheries
 - ✓ Increase production costs and reduce yields

Globalization as a Driver of IAS in Africa

- Introduction and redistribution of IAS in and within the continent due to globalization
 - ✓ Increase in human movement
 - ✓ International trade liberalization through global and regional trade agreements (RTAs)

Number of established alien species in Africa

- Lack of accurate data
- Estimate of over 3,500 alien plants are established in African countries
(Pysek et al. 2017)

Number of established plants in African countries

Country	Number of species e	Country	Number of species
Algeria	328	Libya	147
Angola	227	Madagascar	517
Benin	333	Malawi	50
Botswana	170	Mali	74
Burkina Faso	149	Mauritania	84
Burundi	187	Mauritius	731
Cameroon	296	Morocco	410
Cape Verde	740	Mozambique	103
The central African Republic	57	Namibia	218
Chad	274	Niger	37
Comoros	100	Nigeria	193
Congo	56	Rwanda	229
Cote d'Ivoire	266	Sao Tome & Principle	314
DR Congo	522	Senegal	97
Djibouti	42	Seychelles	165
Egypt	179	Sierra Leone	76
Equatorial Guinea	187	Somalia	63
Eritrea	65	South Africa	1040
Ethiopia	421	Sudan	59
Gabon	94	Swaziland	315
The Gambia	11	Tanzania	157
Ghana	190	Togo	63
Guinea	86	Tunisia	225
Guinea Bissau	97	Uganda	152
Kenya	145	Zambia	84
Lesotho	206	Zimbabwe	238
Liberia	141		

The relationship between invasion process and management options

STAGES OF INVASION PROCESS	INTRODUCTION	ESTABLISHMENT	INVASION - PROLIFERATION	INVASION - IMPACT
	Deliberate or accidental release into the natural environment.	Naturalised, but with limited spread.	Increasing abundance and dispersal.	Threatening conservation values. 
MANAGEMENT OPTIONS	Prevent introduction/ escape, eradicate if escaped.	Eradicate if feasible, otherwise control and contain; prevent further introductions.	Eradicate if feasible, otherwise control and contain.	Eradicate if feasible, otherwise control to protect biodiversity.
INTERVENTION EFFECTIVENESS & COST-EFFECTIVENESS

BLEACH

ACIDS

POISONS,
TOXIC

FLAMMABLE
LIQUIDS

Do not carry or import restricted or prohibited items into Tasmania

Fruit and
vegetables

Seafood, some
animal products

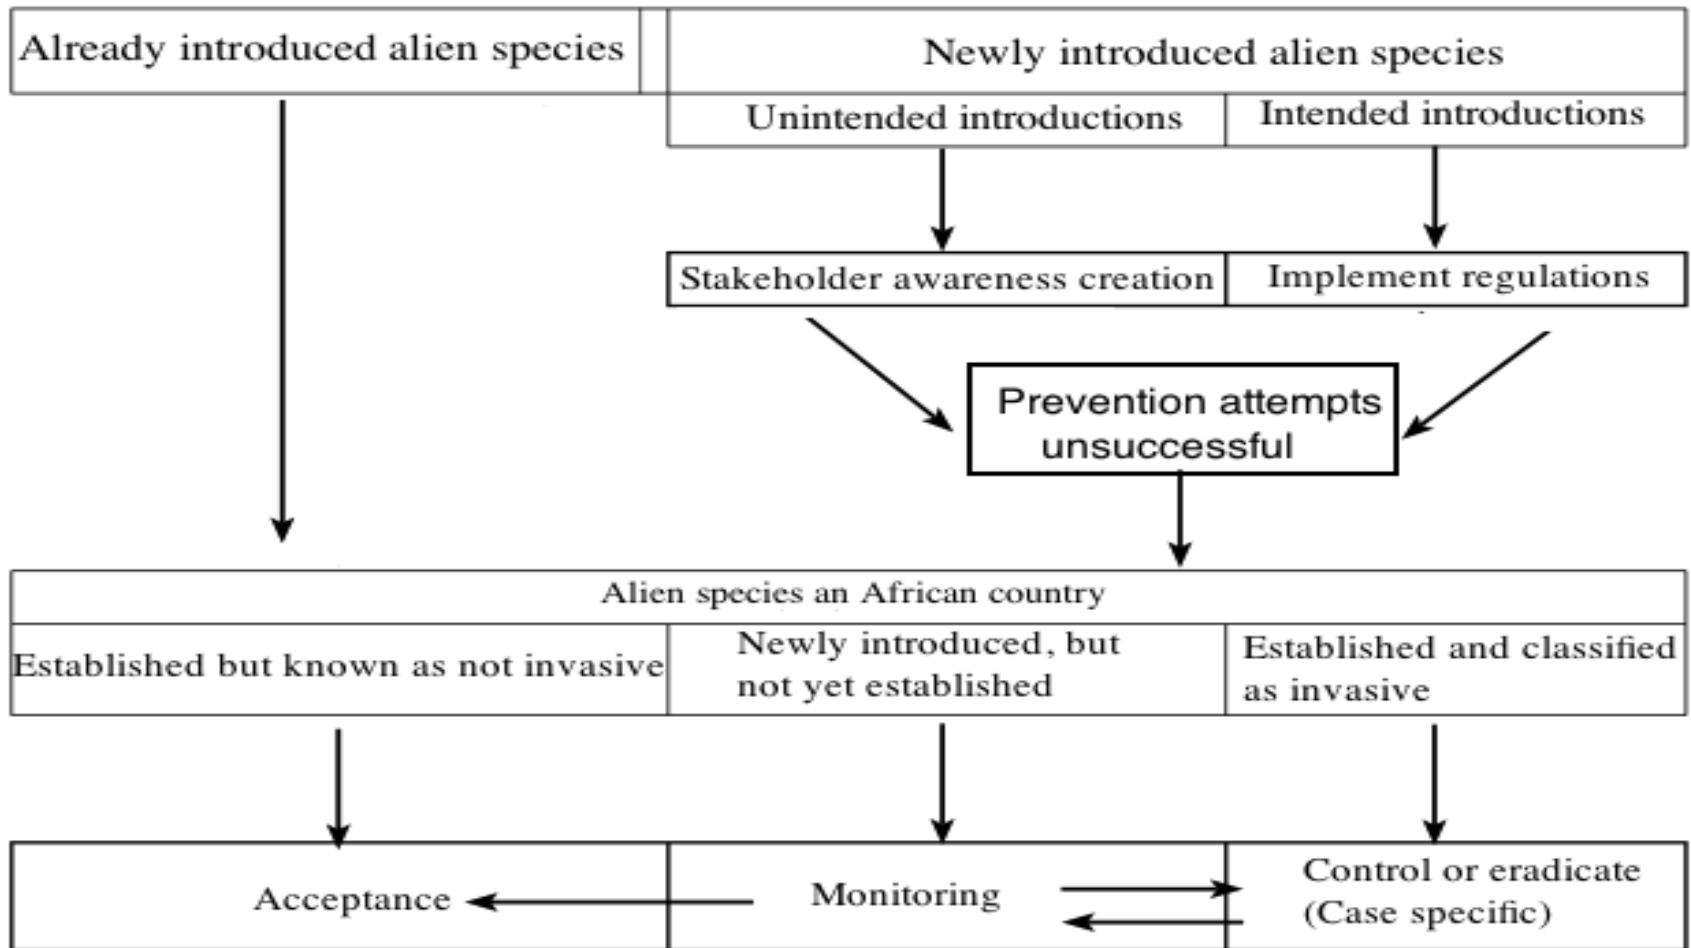

Plant material,
soil and seeds

Importance of policy direction, strong institutional and legal environment

- Regionally, there are no standardised recommendations and guidelines
- At national levels, there are inadequate policy frameworks and a general lack of technical capacity
- Need for institutions or authorities to facilitate information sharing, harmonize and coordinate national policies towards IAS

Propose framework

Modified from Klingenstein and Diwani 2005

Conclusion

- Continuous introduction, spread and establishment of many alien species on even remote part of the continent.
- Lack of technical capacity and funding to effectively implement control measures
- Need for management decisions including implementing preventive measures such as awareness creation and enforcing regulations can prevent future introductions.
