

## Project Update: December 2010

This workshop aimed to train the National Park Rangers and Neuquén province Wildlife Managers.

The speakers were:

- Elizabeth Chang Reissig (Dr. Veterinary). She spoke about the diseases found in red deer and how to take sample tissues on field.
- Maria Andrea Relva (PhD in Biology, CONICET). Presented the results of 10 years of research in red deer impact at Nahuel Huapi National Park.
- Javier Sanguinetti (PhD in Biology, Lanin National Park). Talked about the vegetation monitoring protocol that we will set up and measure this summer.
- Nicolás Ferreyra (PhD candidate, Lanin National Park). Showed the results on red deer management of 2009 and 2010.

This workshop was interesting due to the collaboration of Elizabeth and Maria Andrea, who also work with red deer in Nahuel Huapi National Park (neighbour of Lanin National Park).
