Linking Ecological Knowledge and Local Hearts to Save the Sea Turtles of Anambas Islands

42388-1 - Novita Permata Putri

Photo 1. Semi-natural hatchery – Currently, there are five semi-natural hatcheries in three nesting beaches, each capable of holding up to 80 - 100 nests.

Photo 2. Night Patrol – Anambas Foundation and turtle rangers carry out a night patrol to gather morphometric data on nesting turtles.

Photo 3. Our turtle ranger, Rian, doing nest relocation after the turtles have laid their eggs. This helps prevent illegal traders from taking the eggs.

Photo 4. Metal tagging – Rangers perform turtle tagging, totaling up to 167 turtles, including 145 Green Sea Turtles and 22 Hawksbill Turtles.

Photo 5. Caesar conducted an interview with Fisher in Keramut Village to gain a deeper understanding of local ecological knowledge regarding the turtle population in West Jemaja.
