

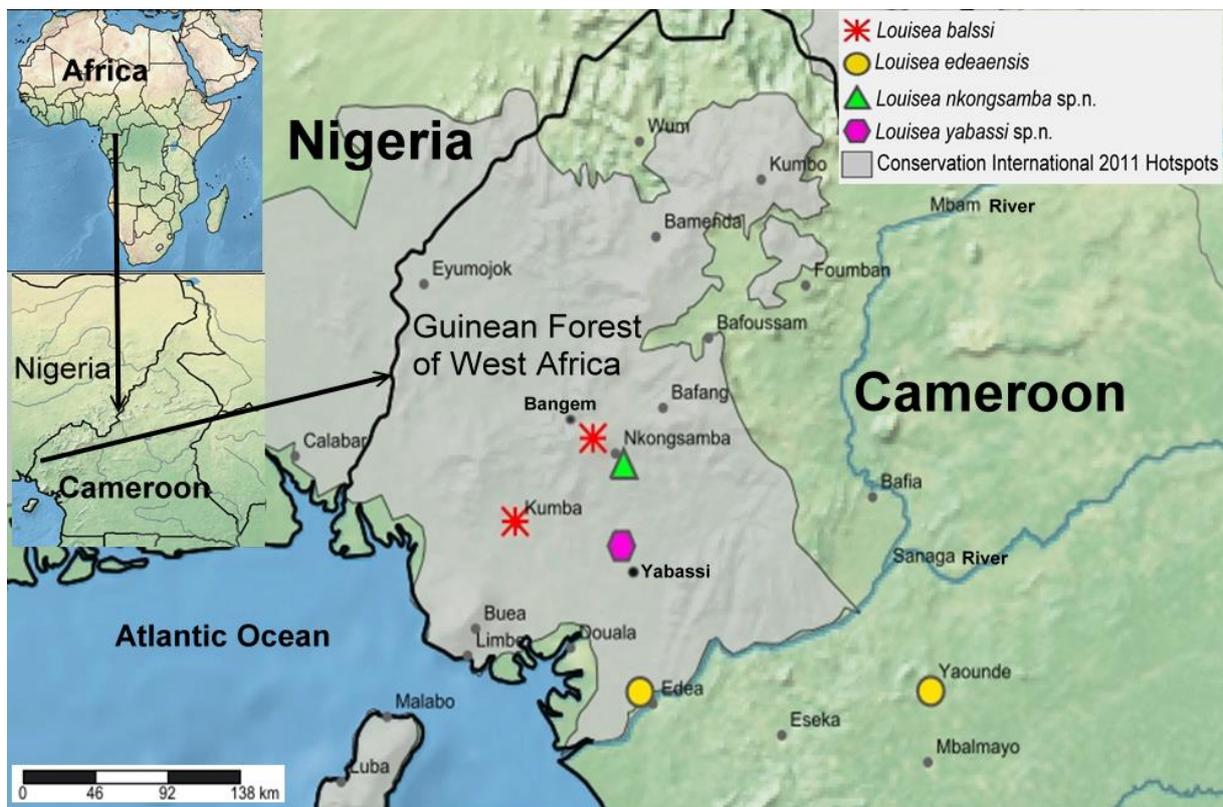

# Mapping of species in the genus *Louisea* Cumberlidge, 1994 endemic to Southwestern Cameroon.

By

**Dr. Pierre A. Mvogo Ndongo, Ph.D.**

The previous record of *Louisea edeaensis* and *L. balssi* dated back more than 100 years. Thanks to the Rufford Foundation, those species were recently rediscovered and the new species discovered from the new other threatened localities. The publication is in preparation. Further conservation action plan needs to be implemented in the new species discovered and their threatened habitats.
