

Project Update April 2025

Rufford I.D.: 46535-1

Update: Last April, I was in Tana because there wasn't enough room for me to sleep at the camp. So, I'm at the forest this month. I'm peeling the pulp from the fruits eaten by *Eulemur rufifrons*. In some photos, I'm extracting the fruits of *Colubrina decipiens* (plant species) using a Bahco caterpillar P34/37 directly from the tree. I then remove the pulp to dry it in the sun.
