

Project Update February 2025

Rufford I.D.: 43343-1

Project Title: Integrating Fisher's Local Ecological Knowledge for the Identification of key Ecosystems for Threatened Shark Species' Conservation in the Galapagos Islands

Update: The community suggested we return with educational materials to share the main results, so we decided to create illustrations representing threatened shark species and used these to produce informative posters.

Photo 1: Escuela

These posters were distributed in schools to educate children about lesser-known species on the islands, so they can learn to identify them; and a poster to help them distinguish between the various hammerhead species found in the Galapagos.

Photo 2: Agencia

Additionally, posters were distributed to touristic agencies for tourists to recognize the importance of sharks and promote responsible tourist practices to protect them and create consciousness about their conservation state.
